ADT’s new smart security system will unlock your door for a Trusted Neighbor

ADT’s long-rumored new security system is now live on ADT.com. Featuring entirely new ADT hardware and integrations with Google Nest cameras, smart speakers, and more, the new ADT Plus system has a distinctly Google Nest Secure look and feel (RIP). But how it will work in your home remains to be seen.

The company also announced that the Yale Assure Lock 2 will be the first smart lock compatible with Trusted Neighbor, its new feature that leverages technologies such as smart locks and facial recognition to make it easier for people you trust to get into your home in an emergency — or just to feed the dog.

If you have the smart lock as part of the system, you’ll be able to set it so that when your “trusted neighbor” comes to the house to help you out, the door can unlock automatically and the system disarm, then re-lock and re-arm when they leave.

The Yale Assure Lock 2 is being offered in a bundled starter kit for the new system, which regularly costs $658.98 but is launching with a 30 percent discount for $461.29. The Front Door Protection bundle includes the new base station, two door/window sensors, a Yale Assure Lock 2, and a Google Nest Doorbell (battery). Professional monitoring is $45 a month and includes a subscription to Nest Aware for event-based video recording (if you want 24/7 video recording, it’s an extra $7).

The premium Total Safety package adds a third door/window sensor, a motion sensor, three Google Nest Cams (Nest Cam indoor, Nest Cam indoor/outdoor, and Nest Cam floodlight), and three water temp sensors for $1,101.76 (reg $1,573.95). You can also build a package that starts at $269 for the base station and one door/window sensor.

The ADT Plus system can be self-installed and self-monitored. However, you have to pay for one month of monitoring to purchase the system – after that, you can self-monitor for free, according to the company. For professional installation, a 36-month monitoring plan is required.
