

Apple charges \$14,549 for a fully specced touchscreen MacBook Pro

With an OLED display and touchscreen capabilities, it's no surprise that the new MacBook Pro Apple announced today is more expensive than the MBP announced earlier this year. But upgrading the base models that start at \$2,899 for the 14-inch, and \$3,399 for the 16-inch, with every premium hardware option that Apple offers pushes those prices to an eye-watering \$14,249 and \$14,549, respectively.

Both of those premium configurations include the M5 Max chip with an 18-core CPU and 40-core GPU, \$150 worth of nano-texture glass, 128GB of memory that adds an extra \$2,000, and 16TB of storage which is the real budget breaker here thanks to the ong ...
