Apple gets into AI: all the news on iOS 18, macOS Sequoia, and more

Apple has released iOS 18 — plus iPadOS 18, macOS Sequoia, watchOS 11, and other new updates — bringing several key updates to how the company's devices operate and setting the stage for generative AI features.

The most discussed feature of iOS 18 is the Apple Intelligence suite. With the release of iOS 18.2 on December 11th, features that are available now include generating images in Image Playground, creating custom "Genmoji" emoji, and ChatGPT integration. Other features of Apple Intelligence, including writing tools such as the ability to rewrite your text in different styles, trickled out to customers starting in October.

Read on for all the news about Apple's latest set of operating system updates.
