Apple’s latest iPad Mini is down to its lowest price to date

If you’re in the market for a highly portable tablet, Apple’s smallest tablet has fallen to its lowest price to date at multiple retailers. Right now, the latest **iPad Mini** is on sale at Amazon and Best Buy with Wi-Fi and 128GB of storage starting at $399 ($100 off). If you need more storage, you can also buy the step-up model with 256GB of storage for $499 ($100 off) or the 512GB variant for $699 ($100 off).

With its 8.3-inch screen and lightweight design, the latest iPad Mini is closer in size to the iPhone than any other tablet in Apple’s lineup. As a result, it’s easier to carry on the go and hold with one hand, making it an excellent option if you read a lot on your tablet. Its small size doesn’t come at the expense of performance, though. In fact, the onboard A17 Pro chip is snappier than the A14 Bionic chip found in the entry-level iPad, even if it’s not as speedy as the processors in the M4-powered iPad Pro or M2-powered Air.

Unlike the base iPad, the seventh-gen Mini supports Apple Intelligence, so you can take advantage of a host of AI-based features — such as AI-assisted summaries, Genmoji, ChatGPT, and the ability to erase unwanted objects in photos. It also supports the newer Apple Pencil Pro, along with Wi-Fi 6E and faster USB-C performance. They’re pretty iterative updates overall; however, they’re also a lot more appealing at $399 than they are at the tablet’s typical retail price of $499.
