Chatbots might be coming to Apple’s HomeView

Code in the iOS 27.3 beta suggests that Apple could add support for chatbots to its smart home hub. There’s a flag listed for a “Conversational Apps” category. While there are no details about what apps would fall under that heading, it seems reasonable that AI chatbots like ChatGPT and Claude could be added to HomeView. According to pdfu on X, that new beta also adds support for bidirectional audio routing and session management, but says it’s “still not fully wired up.”

Apple has also added anti-spoofing protection that will require a user to authenticate themselves with an iPhone after three failed attempts. It will also have a lockout s …
