Chrome on Android can read webpages out loud from within the app

Google is rolling out a new option called “Listen to this page” that can read a webpage out loud to you from within the Android Chrome browser. The feature comes with playback controls similar to those you’d find in music or podcast players, letting you pause, change the reading speed, scrub forward, or skip ahead or back by 10 seconds at a time.

You can also change the voice it uses, as well as the language. The feature supports several, including English, French, German, Arabic, Hindi, and Spanish, according to a Google help page about the feature. To see if you have it, head to a page with a lot of text, then tap the three dots menu and “Listen to this page,” which should appear just below the Translate option.
