Computex 2026: All the news and announcements

Nvidia has officially entered the world of consumer laptop chips with the RTX Spark, and several device makers already have hardware lined up for it. Microsoft, Asus, HP, MSI, Lenovo, and Dell are expected to launch RTX Spark laptops sometime this fall, and some of those partner companies have shared details about what we can expect.

The common feature shared by all of the upcoming launches is that Arm-based Nvidia RTX Spark superchip, though several variations are in the pipeline. The flagship version unveiled by Nvidia at Computex includes 20 CPU cores, 6,144 GPU cores, and 128GB of LPDDR5X memory — making it near identical to the GB10 chip inside Nvidia's DGX Spark "personal AI supercomputer." Other versions with as little as 16GB of memory will come later, according to Nvidia.
