

eBay's biggest Black Friday deals include Sonos speakers and DJI drones

Although we're over twelve hours into this year's main Black Friday event with plenty of stores selling out of major deals, eBay is refreshing its deals by the hour, which makes it easier to catch discounted goods.

We've found the best tech deals that eBay is offering so far, updated with a new round of deals released just today, including price cuts on PS4 bundles and gift cards attached to discounts for the GoPro Hero6 and the Google Home Mini. If you're a frequent shopper of eBay, those gift cards give the online marketplace an edge over other deals offered on the same items elsewhere.

Previously, eBay was trying to one-up other major retailers pre-Black Friday by offering to price-match competitors' deals that had already been announced ahead of the shopping event. , eBay price matched select deals from Walmart, Kohl's, Macy's, and JCPenney. eBay was also offering for 20 percent off your purchase through November 20th, including on computers and cell phones.

Some of those early price matching deals are still around but others have sold out. Note that the Apple Watch Series 3 is only \$5 off, but that's about the biggest discount on the latest model of the device so far among major retailers.
