FromSoftware’s next game is Armored Core VI

FromSoftware only just released *Elden Ring* in February of this year, in a trailer at The Game Awards, the famed developer’s revealed that its next big project is *Armored Core VI: Fires of Rubicon.* It’s set to be released in 2023.

It’s difficult to know exactly what to expect based on the *Armored Core VI’s* esoteric trailer, which featured a lot of lingering shots of giant mechs. But the trailer definitely creates an awesome mood that I hope captures what it’s like to play the game itself. *Armored Core VI* will be available on PS5, PS4, Xbox Series X / S, Xbox One, and PC via Steam when it’s released next year.

For fans of the *Armored Core* series, this game has been a long time coming, as *Armored Core V* was released more than a decade ago in 2012. Since then, FromSoftware has become one of the most popular developers in gaming thanks to games like the *Dark Souls* series (though the first *Dark Souls* came out before *Armored Core V*), *Bloodborne*, and *Elden Ring,* and we’ll have to see if the studio can use what it learned from those games for this new *Armored Core*.
