

Galaxy AI features are coming to last-gen Samsung phones – including the S21 series

Samsung is planning to bring select Galaxy AI features to several older flagship phones and tablets next month via the One UI 6.1 update, according to *9to5Google* and *Android Central*, both of which referred to a post from a Samsung representative who posted on the company's community forum in Korea. *The Verge* has reached out to Samsung for further comment.

A slightly trimmed-down version of Galaxy AI (sans Instant Slow-Mo) will be coming to Samsung's flagship lineup from 2022, specifically the S22, S22 Plus, S22 Ultra, Z Fold 4, Z Flip 4, Tab S8, and Tab S8 Ultra. Each device will receive the same version of Galaxy AI as Samsung's lower-priced Galaxy S23 FE. Instant Slow-Mo, which automatically plays a video in slow motion once you tap it, was introduced to Galaxy AI with the S24 line, though it's also now available in S23 models.

If you happen to own a flagship Samsung phone from 2021,

there's even a treat in store for you. Samsung's forthcoming update will bring two Galaxy AI features, Circle to Search and Magic Rewrite, to the S21, S21 Plus, S21 Ultra, Flip 3, and Fold 3.
