Go ahead and charge your iPhone X on a wireless Pikachu charger

We've waited years for the iPhone to support wireless charging. We wanted that convenience, we said. We wanted to be just like our Android brethren, we said. And now, I'm happy to share that we can all unite over a wireless Pikachu charger. A company called TeknFun just announced the Pikachu, which it says should be compatible with Samsung devices and the iPhone 8 and X.

It's available through GameStop for $49.99, although it appears to be unavailable at the moment, even though it's advertised as an online only product. It features three USB ports and Pikachu's cheeks should light up when charging.

I love it. Now I need to buy a iPhone X or 8 so I can use it.
