

Google is fixing outdated Pixel weather forecasts

Some Google Pixel users have found that their At a Glance widget has been showing outdated weather forecasts, as reported by *Android Police*. But the company says in a statement to *The Verge* that it's addressing the issue.

According to one user on Reddit who has been dealing with the problem, "the current temperature is fairly accurate, but the expected high/low forecast hasn't been correct in the past week." The expected temperatures in the weather app itself were also accurate, they said.

Another user on Google's support forums said that their Pixel 8A's lock screen was showing "the weather for the correct location, but in the morning it shows yesterday's forecast as

the temperature 'today' and in the evening it shows today's forecast as the weather 'tomorrow.'"

In a statement this afternoon, Google spokesperson Matthew Flegal says that "we're currently rolling out a fix for an issue causing outdated weather forecasts on the At a Glance widget for some Pixel users."
