Google’s Tabletop AI experiment lets you build custom collaboration apps

Tabletop isn’t anything to do with D&D or boardgames, but it does make it easier to coordinate with freinds, | Image: Google

Google has cooked up a new experimental AI tool called Tabletop that generates customized collaborative hubs to help you coordinate with family, and friends. The Tabletop platform shares some visual similarities with workplace management apps like Asana and Monday, but with a built-in AI feature that allows you to vibecode personalized interactive tools by describing them, such as savings trackers, chore charts, event plans, and more.

“Just add in your links, files and ideas, then prompt @tabletop — or pick a starter template — to generate custom interactive trip itineraries, dinner polls, expense splitters and tournament brackets,” Google …
