

Hallmark's glowing Xbox 360 ornament plays the Halo theme

The 3.25-inch tall replica of Microsoft's nearly 20-year-old console (the 360 launched in November 2005) is surprisingly detailed for something that's going to get lost amongst a sea of ornaments on your tree, and includes a matching mini controller permanently leaning up against the console's base.

It's powered by a trio of replaceable button batteries should you get overly nostalgic and hit the button ad nauseam. The Xbox 360's power button even lights up green when pressed, and although green and red is often considered the official colors of the holiday season, it doesn't appear as if you can create the 360's Red Ring of Death, despite Microsoft not shying away from making other merchandise featuring the infamous error message.
