Hoto’s powerful PixelDrive electric screwdriver is 25 percent off

Hoto makes electric screwdrivers for different budgets. If you don’t want to spend much, you can get its most basic model, which we’ve recommended many times. That one comes with 25 bits, and has three levels of torque for $29.99 (usually $59.99). But if you want more power and versatility, its **PixelDrive model** might be the better option. It offers six levels of torque, plus two speed options: 80RPM for precision-oriented tasks, and a 200RPM setting for faster action. Hoto has knocked $20 off its price, and you can pick it up for $59.99 at Amazon.

The PixelDrive also offers more bits than Hoto’s basic model (30 versus 25) and a bigger battery (2,000mAh versus 1,500). This model features a 360-degree LED light near the bit to illuminate where you need to screw or unscrew, and its display shows the battery level as well as your torque selection. While the carrying case included with the affordable Hoto electric model is already miles ahead of what’s included with most competing products, the stacking cylindrical bit case set included with the PixelDrive goes a step further. Its camera lens-inspired design should blend in a little more easily wherever you like to tinker.
