How to make your iPhone homescreen icons clear using iOS 26

The process of customizing your icons works exactly the same as it did for the tint:

And that’s it! Your homescreen icons will immediately assume the Liquid Glass design, letting you see through them to your wallpaper (which is kind of nice, especially if you’re really proud of your wallpaper).

If you want to try something else, such as the tinted look, or go back to the way things were, just follow the same steps. Have fun!
