iOS 18.3 beta disables news notification summaries after high-stakes errors

In our own extensive testing with Apple Intelligence notification summaries in iOS 18.1 and macOS 15.1, we observed many instances of summaries that were inaccurate or just plain weird. When you're just getting updates from your Discords or group text threads, errors tend to be pretty low-stakes, at least. But when you're getting notifications about war, murder, and politics, these kinds of errors have the potential to mislead and misinform.

The iOS 18.1 and 18.2 updates (along with iPadOS 18.2 and macOS Sequoia 15.2) enabled most of Apple's promised Intelligence features across all the hardware that supports them. For the iPhone, that's still only 2023's iPhone 15 Pro and 2024's iPhone 16 and iPhone 16 Pro.

The iOS 18.3 update is currently in its third beta release. The iOS 17.3, 16.3, and 15.3 updates have all been released in

late January, so it’s likely that we’ll see the 18.3 update (and corresponding updates for iPadOS, macOS, and other Apple software) released at some point in the next few weeks.
