Meta turns Muse sharing back on

Meta has re-enabled Muse sharing after security researchers had reported that public conversation links could be easy to find. The researchers said they had been able to find Muse pages like a marketing company’s internal revenue review and a small business owner’s loan application.

Researchers at Claroc reported earlier this week that Muse the web addresses for shared conversations from Muse were named after a conversation’s title and written into public DNS. *Ars Technica* said Tuesday that Meta paused the sharing feature after it reached out about what was going on.

In a post today on X, Meta’s David Singleton says that “The underlying is …
