Sony’s DualSense Edge controller is receiving a rare $30 discount

Sony might have just recently introduced a new low price on the PlayStation 5 Pro with its latest Days of Play sale, but that’s not the only deal worth your attention. Sony is also offering a range of accessories at a discount, including the high-end **DualSense Edge**. Regularly $199.99, the customizable controller is available from Amazon, Best Buy, and Sony for an all-time low of $169 through June 11th.

If you’re looking for a highly customizable controller, the Edge is a great option that offers excellent software integration with the PS5. The premium gamepad lets you effortlessly switch between up to four personalized profiles, each of which lets you customize things like stick sensitivity and rear button controls. It’s just as easy to swap out stick

modules, too, allowing you to quickly replace the stick tops should they ever wear out. What’s more, the rear triggers feature adjustable stops, so you can control how far they can be pressed and fine-tune your response time in shooters and other competitive games.

Additionally, the Edge offers the same haptics and adaptive triggers found on Sony’s standard DualSense controller, along with two styles of rear paddles, each suited to a different grip preference. Its charging cable also features a handy locking mechanism to ensure it won’t get yanked out while gaming; however, the Edge is limited to approximately eight hours of battery life when used wirelessly, meaning it doesn’t last quite as long as the OG DualSense. I guess that’s the price you pay for souped-up components and software, at least with Sony.
