

Soundcore's latest noise-crushing headphones are on sale for a new low price

The Space 2 comes in multiple colors, including an attractive seafoam green. | Photo: Amelia Holowaty Krales / The Verge

My colleague John Higgins considered Soundcore's Space One some of the best budget noise-canceling headphones you could buy when they launched in 2023 – and their successor has only improved upon their winning formula, albeit with a \$30 price increase. Thankfully, the **Soundcore Space 2** are currently on sale at Amazon, Best Buy, and Walmart in all three colors for an all-time low of \$106.49 (\$23 off), making them even easier to recommend.

Soundcore Space 2

Where to Buy:

- ~~\$129.99~~ \$106.49 at **Amazon**
- ~~\$129.99~~ \$106.49 at **Walmart**
- ~~\$129.99~~ \$106.49 at **Best Buy**

The Space 2 builds on the original with improved active noise cancellation, particularly when it comes to the low-frequency sounds associated with trains and airplane engines. They also deliver more accurate sound performance thanks to various design upgrades, while retaining many of the same features that made the Sound One sound so good for the price, including support for high-resolution LDAC audio. You also still get access to HearID 3.0, which lets you personalize the sound by listening to a series of samples and adjusting accordingly.

Battery life is another welcome improvement. The Space 2 can last up to 50 hours with ANC enabled or 70 hours with it switched off, up from 40 and 55 hours, respectively, on the original. And when your battery dies, you can still use the equipped 3.5mm jack for wired listening. They'll also automatically pause playback when you take them off, which is handy when you need to step away without losing your place in a song or podcast.
