# Start Smart: Build a Strong Foundation in Lightroom Classic with Rob Sylvan

If Lightroom Classic has ever felt more complicated than it needs to be, sometimes the problem isn’t Lightroom. It’s how everything was set up in the first place.

In this new class, **Rob Sylvan** goes back to the fundamentals and shows you how to build a Lightroom Classic workflow that will serve you well for years.

You’ll learn how the catalog really works, how to create a reliable backup strategy, and how to make smart decisions about importing, previews, folders, and presets. Rob also tackles one of those problems nobody wants to see: missing photos.

Whether you’re just getting started with Lightroom Classic or you’ve been using it for years and aren’t entirely sure your setup is as solid as it could be, this class is a great way to get everything on the right track. You can **preview two lessons from the class for free**, then jump into the full class when you’re ready.
