T-Mobile is introducing ‘revamped’ 5G Home Internet plans

T-Mobile is once again shuffling its 5G internet options, adding a streaming bundle to its priciest plan and introducing a new mid-tier option. The new plans start at $50 per month (including an autopay discount) and become available starting December 11th.

Importantly, it seems that prices are staying consistent with T-Mobile’s previous 5G Home Internet options — if you’re new to T-Mobile. Discounts for existing customers with a T-Mobile voice line aren’t quite as generous with the new plans.

The new T-Mobile Rely Internet plan costs $50 per month for new customers, which is what T-Mobile charges now for its Home Internet Unlimited plan. Current T-Mobile customers will pay $35 per month, which is $5 more than the $30 a month promo the company is offering now. Unlike the pricier plans, Rely includes a previous-gen 5G router.

The next step up is a new T-Mobile Amplified Internet plan that costs new customers $60 a month with autopay or $45 with a T-Mobile voice line. It comes with T-Mobile’s newest 5G gateway; the small business version of the plan includes a mesh access point, too.

The new top tier plan, All-In, includes the latest router and

a streaming bundle with ad-supported Hulu and Paramount Plus Essential. It’s still $70 per month to new T-Mobile customers, but current customers will pay $55 per month — again, not quite as good as the $50 per month promotional price on the outgoing Internet Plus plan.

T-Mobile spokesperson Katie Brinton tells *The Verge* “There are no changes for existing customers” on the outgoing plans. The Home Internet Backup plan is also sticking around for anyone who just wants an option when their primary Wi-Fi goes down.

Wireless carriers in the US are leaning into fixed wireless internet as a way to make the most of the 5G spectrum these companies have acquired at great cost. T-Mobile has been at the front of the pack with 6 million wireless internet customers, according to its October 2024 earnings release. But its net internet customer additions were down year-over-year, something T-Mobile’s earnings factbook attributes partially to “Increased deactivations from a growing customer base.” A fresh batch of internet offers with extra streaming services included look like they’re a key part of T-Mobile’s strategy to keep pushing forward in the category.
