Google has been on the mind of many users ever since ChatGPT went viral. For a long time, Google chose to remain silent as it feared potential misuse of its chatbot AI. But, now the Big G has thrown its hat in the ring with Google Bard.

The service is an experiment in conversational AI. Unlike most of the chatbots in this list, Google does not use a large language model in the GPT series, rather it uses a lightweight version of LaMDA.

Regarding coding and serving as a search engine, Bard was not the chatbot’s strongest suit. Nevertheless, it proved to be a very useful text assistant capable of editing text, writing cover letters, summaries, and resumes.

Google Bard is now available to everyone without delay, as it was previously limited to a few people. In addition, the company is bringing generative AI to search, changing how people search for information. Also, result pages will soon include quick answers to questions.

With OpenAI technology, this is an “AI Pair Programmer” developed by GitHub. The model was trained with trillions of lines of code from GitHub public repositories, making it an excellent AI tool for developers.

Combining machine learning with context, such as comments, variable names, and code structure, autocompletes your code. JavaScript, TypeScript, Python, and Go are among the programming languages supported by GitHub Copilot.

Copilot X, the latest version of Copilot, is powered by the new GPT-4 model, which was introduced by GitHub recently. An IDE provides additional features such as AI chat support, pull request support, and test generation, all of which can be used directly from the CLI.

Code suggestions by GitHub Copilot are not always accurate, since they sometimes suggest long-form codes instead of shorter, clearer ones, or even deprecated ones.

Pricing: After a 30-day free trial, you must pay a subscription fee to continue using GitHub Copilot. However, students, teachers, and people who maintain well-known open-source projects can use it for free.

Recently, Anthropic launched Claude, a next-generation AI assistant capable of conversing and processing text.

For Claude to be helpful, honest, and harmless, Anthropic researched how to train AI systems to think in these ways. In addition to summarizing, searching, writing, and Q&A, Claude can also help with coding.

In their developer console, it is available as a chat interface and an API.

Also, in addition to Claude, Anthropic offers Claude Instant, a lighter, cheaper, and faster version of Claude. In addition to Quora, Juni Learning, Notion, and DuckDuckGo, the company has partnered with several other brands.

Pricing: Claude uses a token system. So, a Prompt is $1.63/ million tokens on Claude Instant, and $11.02/ million tokens for Claude.

Essentially, this ChatGPT alternative is a demo version of ChatGPT. However, OpenAI's GPT3 and other models allow experimentation.

For those locked out of ChatGPT, OpenAI Playground is a great way to experience its advanced features. Users can experiment with different languages using ChatGPT on the web.

There are many functions on the playground, such as setting the temperature, frequency penalty, token number, and stop sequences. And, considering OpenAI powers it, it is just as effective and accurate at answering and resolving coding-related questions as ChatGPT.

Pricing: Unlike ChatGPT, it has one major limitation: it is not free. OpenAI offers a free trial credit of $18 when you first access the playground, which you can use to prompt the AI. It expires after three months or when the free credit is used up. To continue using the playground, you must purchase more credits.

A ChatGPT alternative, Perplexity AI, is also trained on OpenAI's API, so it does well and gives good answers. There's nothing complicated about the website, and it's easy to use. It works like ChatGPT, including holding conversations and answering questions. In contrast to ChatGPT, Perplexity actually cites its sources.

Each time it's asked a question, the AI cites its source at the end, just like Wikipedia does. Personally – I appreciate Perplexity's diligence when writing content.

With Perplexity, you can ask clarifying questions and narrow the search with the GPT 4-powered co-pilot mode. As for the website, it has a dark web. And, it's available as an app for iPhone and Android.

With Perplexity AI, you don't even have to create an account to use it. It's like ChatGPT, but you can actually check out

some citations using it.

YouChat uses OpenAI’s GPT-3 as well. Like ChatGPT, YouChat lets you input a prompt, and it will write it for you, just as it would for free with ChatGPT. You can input math, coding, translating, or writing questions, and the chatbot will answer them automatically. Due to its lack of popularity, this chatbot is very accessible at any time – which comes in handy when many users use ChatGPT at once.

In addition, this chatbot cites sources from Google, which ChatGPT cannot do since it doesn’t have an internet connection. For example, a YouChat response to a question about soda contains a conversational text response and cites sources from Google. In addition to being just as functional as ChatGPT, the chatbot is free and has no annoying capacity limitations.

It is likely that none of the other ChatGPT alternatives will provide you with a completely different experience as Pi does. This chatbot follows a unique design based on its ability to be supportive and intelligent. Instead of full-fledged chats, conversations take place dialogue by dialogue on Pi. A unique aspect of Pi is that it also speaks back. A variety of voices can be selected from the website, each of which is eerily realistic and oddly soothing.

When you begin the conversation, Pi reads every message you send and attempts to figure out what you are trying to convey. Like a therapist, pi is extremely curious and tries to comfort the user. Although Pi can get monotonous if you keep talking, it is one of the best alternatives to ChatGPT. The downside is that you have to sign up with an account and a phone number,

which can be a hassle for some users.

Pricing: You can download the chatbot for free on iOS or via the web browser.
