

These new Aukey wireless chargers come with cooling fans

All three use the Qi2 standard, which means up to 15-watt charging for compatible phones and backward compatibility with normal Qi devices. Aukey claims they can drop charging temperatures as much as 68 degrees Fahrenheit compared to “traditional wireless chargers.”

The MagFusion 3-in-1 Pro stand can simultaneously charge an iPhone, AirPods, and an Apple Watch. It can tilt up and down over a 30-degree range, also. The MagFusion GameFrost is, as the name implies, meant for gaming sessions, using a thick MagSafe puck-style design (yet with an admirable lack of RGB lights!). Those are both coming later this year for \$129.99 and \$42.99, respectively. The MagFusion Dash Pro, a vent-mounted charger for your car, is out now and costs \$40.99.
