Venice with iPhoneX + DJI Osmo Mobile 2

What can you really do with an **iPhoneX**? We have been testing in Venice the phone (not the new one), just to understand how powerful can be. Venice is our city, where we come from and this is just a short film to show some areas of the city you might know pretty well, and some others which are not yet surrounded by visitors. Together with the iPhone, we have been using the DJI Osmo Mobile 2, testing the stabilization given by the gimbal. The effect is pretty interesting and for sure we are going to use it for our next videos around the world. Any feedbacks are totally welcome!
