Video Tutorial: How To Give Your Photos the Cyberpunk Look

In today’s Adobe Photoshop tutorial I’m going to show you some image processing techniques to achieve a Cyberpunk style visual effect within your photos. This popular art style takes inspiration from 80s nostalgia, and the neon-noir genre of movies such as Bladerunner, which feature densely populated, futuristic cities illuminated by bright neon signs and advertisements. We’ll process the original photo to give it a hyper-realistic HDR appearance, then apply heavy colour grading with hot pinks and bright blues, which are a popular aesthetic of this style. Enhancements to the neon signs, plus some subtle mist and smoke effects will then finish off the image with the stylised atmosphere of those neon-noir movies.
