

Watch Now: Using Governance and Privilege to Gain Control Over Third-Party Access

The screenshot displays a webinar interface. On the left, a slide titled "External User Management: Who contributes?" is shown. It lists "Potential Stakeholders" and features three speakers: Monica Gregory (Vendor Sponsor), Daniel Smith (Call Center Mgr), and Emily Rice (3rd Party Risk Mgr). On the right, a video player shows a presenter, Cassie Christensen, in a modern office setting. Below the video player, a "Resources" section lists three items: a white paper on third-party access risks, another white paper on JIT PAM, and a blog on zero trust convergence. The Saviynt logo is at the top left, and the SecurityWeek logo is at the bottom center.

External User Management: Who contributes?

Potential Stakeholders:

- Human Resources
- Legal
- External Users and Collaborators
- Procurement
- Line-of-Business
- IT Security
- Risk and Compliance
- Manual Process owners (Credentialing, ID Verification, Training, etc)

Monica Gregory
Vendor Sponsor
Selected Globex to manage their customer service call center

Daniel Smith
Call Center Mgr
GLOBEX
Collaborator, providing critical details about their selected team and their organization

Emily Rice
3rd Party Risk Mgr
Responsible for evaluating the external organizations leveraged

Resources

- White Paper: The Hidden Risks of Third-Party Access
- White Paper: JIT PAM - Time to Turn Off 'Always On'
- Blog: The Only Path to Zero Trust Runs Through Convergence

SECURITYWEEK
CYBERSECURITY NEWS, INSIGHTS & ANALYSIS

It's been said "you cannot control the outcome, but you can control the process." In today's world of the "assume-breach" security posture, this has never been more true. Especially when it comes to third-party privilege, one of the most significant attack vectors organizations face.

Watch this webinar from Saviynt and SecurityWeek for advice on how to create more trust in your third party relationships by adding sustainable processes and tools that enable you to control access. In this session Saviynt experts discuss:

- Creating a smooth, secure Day-1 process
- Using just-in-time access provisioning to reduce risk to data
- Leveraging PAM processes to monitor and audit third party activities
