What is Mercury retrograde?

The phrase Mercury is in retrograde refers to a phenomenon where the planet Mercury appears to move backward in its orbit around the sun. The movement happens several times a year. Astrologists believe Mercury retrograde can cause people to feel disoriented and confused.

“When Mercury is moving forward, in its natural motion, communications go generally easily. Though when Mercury goes out of its natural orbit, say in retrograde, there tend to be all sorts of wires crossed and miscommunications,” astrologer Rebecca Gordon told CBS News.

But according to scientists at NASA, Mercury in retrograde is “not real in that the planet does not physically start moving backward in its orbit. It just appears to do so because of the relative positions of the planet and Earth and how they are moving around the Sun.”

Still, this hasn’t stopped Wendy’s from capitalizing on a good marketing opportunity. According to a 2022 YouGov poll, one in four Americans believes in Astrology.
