What to expect from Apple’s iPhone 15 event

Apple is holding its next big event in September to take the wraps off the iPhone 15, new Apple Watches, and more.

Here, we’ll go over how and when you can watch the event, along with the new product announcements we’re expecting to see from Apple.

As is the case with past events, Apple will likely stream the iPhone 15 showcase on its website and . You can also watch it from the livestream embedded at the top of this article.

a:hover]:shadow-highlight-franklin dark:[&>a:hover]:shadow-highlight-franklin [&>a]:shadow-underline-black dark:[&>a]:shadow-underline-white”>An incremental update to the Apple Watch lineup

In addition to the iPhone 15, Apple is also likely to reveal its latest smartwatch lineup — and so far, we’re not expecting many major changes. Not much is known about the expected update to the premium Apple Watch Ultra outside the addition of a darker titanium case, but rumors indicate that the Watch Series 9 will come with an updated S9 processor.

According to Gurman, the S9 chip is based on the A15 processor that Apple introduced with the iPhone 13. This could allow for more efficiency and better battery life when compared to its predecessor, which comes equipped with the S8 chip that’s based on the same tech as the processors in the previous two Watch models.

Other smaller updates expected to come with the Watch Series 9 include a pink color option and the option of a band with a magnetic buckle. We likely won’t see a new Watch SE during this year’s event, as the product appears to be on a two-year refresh cycle and was just updated last year.

With a new iPhone and watch coming, we’ll probably get the release dates for iOS 17 and watchOS 10 during Apple’s upcoming event. As for iPadOS 17 and macOS Sonoma, we might not see them until later this fall, in line with Apple’s recent pattern of launching them in October.

But the betas for each of these operating systems have been out for some time now, giving us a peek at what we can expect. While iOS 17 comes with a number of small but meaningful upgrades, including StandBy mode, voicemail transcriptions, and a Journal app, macOS Sonoma adds widgets, a game mode, and profiles on Safari.

As for iPadOS 17, Apple is adding personalized lock screens, interactive widgets, the Health app, and support for external

USB webcams and cameras. Apple is launching an update to Stage Manager as well, which finally lets you customize the sizes and orientations of each window on your screen.

Lastly, watchOS 10 will *also* incorporate widgets (seeing a trend yet?) that should give you quick access to various apps. There are also new topographic mapping features, mood logging, and a couple of new watchfaces.
