What’s New In Lightroom with Scott Kelby & Terry White

Adobe’s been busy, and Lightroom has picked up some really useful new features across Classic, Cloud, and Mobile.

In this week’s class, **Scott Kelby** joins Adobe’s **Terry White** for a hands-on look at everything that’s new. Instead of simply walking through a list of features, they put each update to work on real images so you can see exactly what it does and decide whether it belongs in your everyday workflow. They cover the new duplicate finder, Assisted Culling, dramatically faster noise reduction, AI-powered video clips, and plenty of other practical improvements that can save time and streamline your editing.

If you’ve been wondering which Lightroom updates are actually worth using, this class is a great place to start.

You can purchase the class for just $39, or subscribe to KelbyOne and get access to this course plus our entire library for just $19.99 a month. Cancel anytime with our 100% money-back guarantee.
